

CHILD SAFETY AND INCIDENT REPORT

Anonymized or restricted review of raised safety alerts, resolution timelines, and follow-up completion status.

EVENT: The General Assembly 2026

EVENT DATE: 25 July 2026

DATA CUTOFF: 25 July 2026, 02:49 PM

CONFIDENCE: 100% (High confidence)

KEY PERFORMANCE INDICATORS

ALARMS RAISED

0

Safeguarding alarms raised

ACKNOWLEDGED RATE

100.0%

0 of 0 alarms resolved

AVG RESPONSE

0.0s

Median alarm resolution latency

CRITICAL ESCAPES

1

Highest escalation tier reached

Safeguarding and Security Overview

This restricted safeguarding report details safety response timelines and escalation records for "The General Assembly 2026". All child identity references, medical specifics, and incident narratives are processed under strict anonymization filters to ensure privacy compliance and child protection. During the event, a total of 0 safety alarms were raised. The average alert acknowledgement latency was recorded at N/A. Verification confirms that 100.0% of raised alerts were successfully addressed and closed. A total of 0 alerts required escalation, with the highest level reaching Tier 1.

KEY FINDINGS

Alert Latency Compliance

INFO

The median alert acknowledgement latency of 0.0s meets the strict under-45-seconds safety baseline.
Supporting Evidence: Verified via the high-speed immutable socket event-log.

Escalation Chain Execution

INFO

A total of 0 alerts required escalation, which correctly triggered SMS notifications to the Safeguarding Lead.
Supporting Evidence: Highest tier reached: Tier 1

RECOMMENDED ACTIONS

Ensure all supervisor devices are powered up and pre-authenticated to prevent session expiration timeouts.

HIGH PRIORITY

Rationale: Avoid temporary offline gaps in alert streaming or device disconnect states.
Assigned Role: Safeguarding Lead

Run a monthly mock response drill to test high-tier escalation channels.

MEDIUM PRIORITY

Rationale: Establish 100% familiarization with team escalation codes among on-duty supervisors.
Assigned Role: Training Facilitator

METHODOLOGY AND DATA PROTECTION

Method 1: Grounded database tracking for emergency notifications.

Note 1: Incident measurements exclude raw, non-anonymized medical details.
