Safeguarding and Security Overview

This restricted safeguarding report details safety response timelines and escalation records for "The General Assembly". All child identity references, medical specifics, and incident narratives are processed under strict anonymization filters to ensure privacy compliance and child protection. During the event, a total of 5 safety alarms were raised. The average alert acknowledgement latency was recorded at 0.0 seconds. Verification confirms that 100.0% of raised alerts were successfully addressed and closed. A total of 4 alerts required escalation, with the highest level reaching Tier 2.

GROUNDING OPERATIONAL FINDINGS

Alert Latency Compliance The median alert acknowledgement latency of 0.0s meets the strict under-45-seconds safety baseline. <i>Supporting Evidence: Verified via the high-speed immutable socket event-log.</i>	INFO
Escalation Chain Execution A total of 4 alerts required escalation, which correctly triggered SMS notifications to the Safeguarding Lead. <i>Supporting Evidence: Highest tier reached: Tier 2</i>	WARNING

PRACTICAL ACTION RECOMMENDATIONS

Ensure all supervisor devices are powered up and pre-authenticated to prevent session expiration timeouts. Rationale: Avoid temporary offline gaps in alert streaming or device disconnect states. <i>Responsible Lead: Safeguarding Lead</i>	HIGH PRIORITY
Run a monthly mock response drill to test high-tier escalation channels. Rationale: Establish 100% familiarization with team escalation codes among on-duty supervisors. <i>Responsible Lead: Training Facilitator</i>	MEDIUM PRIORITY

SYSTEM LIMITATIONS & METHODOLOGY

1. Incident measurements exclude raw, non-anonymized medical details.
